## Ruckit Platform

The Ruckit Platform and associated Ticket Manager products were built to assist and modernize the heavy materials industry. As the Lead Frontend Engineer, I lead a team of five developers in the development and advancement of multiple applications. Built on Angular and backed by Python, the suite of applications has allowed trucking companies to reduce costs, increase productivity, and eliminate waste.

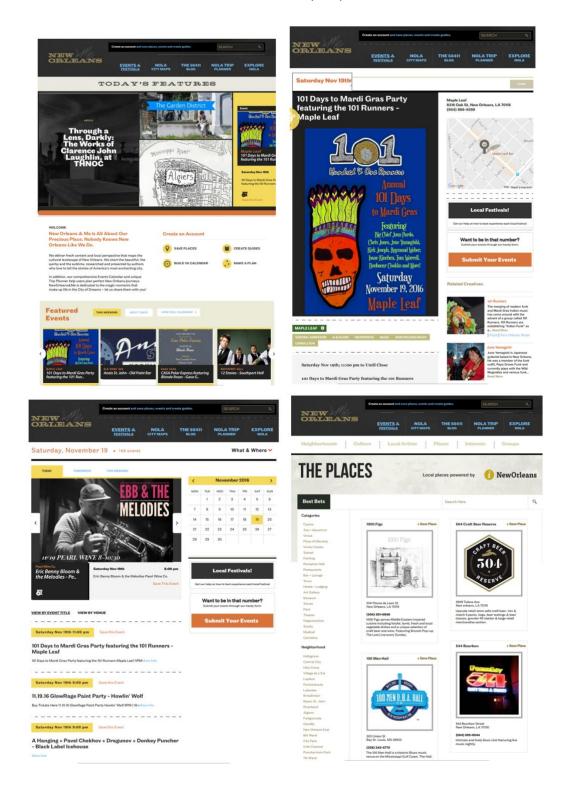

#### iNewOrleans CDX

The iNewOrleans CDX (Centralized Data Exchange) was built to aggregate and manage Place, Event, and Entity data. The platform integrates with external APIs to capture data and provide a consolidated and consistent interface to other application. This system also allows tracked modification of data while still allowing future updates from the original systems. This system was built with heavy GIS functionality via PostGIS to allow fast queries based on geographical locations. Built on Ruby on Rails and PostgreSQL, this application powers several highly trafficked websites reliably.

#### New Orleans & Me

New Orleans & Me was designed to display data from the iNewOrleans CDX and present it in various formats to users. Built in PHP with the CodeIgniter Web Framework, this application gives tourists a view into New Orleans from a locals perspective.

## iNewOrleans Planner

The iNewOrleans Planner is a white label trip planning solution with integrations into the iNewOrleans CDX. This trip planning application was built using Ruby on Rails and PostgreSQL and utilizes Prawn for PDF generation.

## iNewOrleans Ticketing

The iNewOrleans Ticketing system is a robust and secure platform built in Ruby on Rails used to sell tickets for tourism related services. The system features integration with Authorize.Net, external vendors, reporting (PDF, Excel, dashboard, emails), employee sales auditing controls, a REST API, and a redundant infrastructure.

This application also has an iOS companion application that acts as the native front-end to facilitate sales, redemption, and validation of tickets. The iOS component was built at the same time in Objective-C and features integration with three types of Bluetooth printers, Infinite Peripherals card and barcode readers, cash drawers, and Bluetooth EMV components.

## LSU Tiger Tracker

LSU Tiger Tracker was developed to meet the campus need for validating student enrollment or eligibility during events, computer labs, classrooms, and related initiatives. This system was built in Ruby on Rails and was backed by PostgreSQL. A mobile client was also built for iOS using Objective-C and Infinite Peripheral's magnetic stripe, barcode, and proximity card readers.

Still in use today, this system has validated and recorded millions of visits to campus resources. This system was also integrated with the Course Management System Moodle as well as the LSU Photo Portal to provide additional functionality.

## LSU Photo Portal

The LSU Photo Portal integrated with the campus single sign-on solutions (CAS), Blackboard Transaction System, ID Works, and several other University systems to provide real-time access to student, staff, and vendor photos. The LSU Police Department also utilized this application to access photos in research and support of cases and investigations.

The API provided photos for use in LSU Tiger Tracker, Medicat, InnoSoft Fusion, Moodle, ID Works, and remote campuses.

LSUPhotos Here Hele Contact Change Prote View Status Bigs out

### LSU Copier Portal

The LSU Copier Portal was designed to poll Xerox copiers to obtain usage data for billing and contract auditing. A secondary function of this portal was to facilitate copier related trouble tickets. In handling trouble tickets, this system also tracked ticket states and response times to ensure contract compliance. This application was built with Ruby on Rails and PostgreSQL, custom PDF and Excel spreadsheet generation and Single Sign-On (CAS) integration.

## Electronic Monitoring Toolkit

Tracking daily billing for court ordered monitoring programs presents a unique challenge for monitoring providers. Charges accrue daily at rates that may vary per Enrollment. These enrollments are often subject to payment agreement terms, extra charges, periods of suspension, and other complicating factors. This system removes that complexity. With charge accrual and calculation handled, this system goes further to assist with collection letters, reporting, status letters, and client notification.

Built around Ruby on Rails, Prawn, Liquid markup language, Axlsx, and backed by MySQL, this platform reduces staffing and vastly increases collections. By combining Prawn and Liquid, monitoring providers can craft their own letters and rapidly fire-off status letters to courts.

ATTN: Sandra Re: Katie

#### Dear Judge Jupiter:

Please be advised that Katie was placed on the SCRAM Systems Continuous Alcohol Monitoring program on April 18, 2016. — was removed from the SCRAM program on July 15, 2016 persuant to this Courts order. During time on SCRAM, had no confirmed consumption or obstruction alerts and has been successfully terminated from the program. The spaid balance in full for participation in the SCRAM program, they has no further obligation to make payments to our company.

Should you have any questions, please do not hesitate to contact our office. We greatly appreciate being given the opportunity to assist in this matter.

Sincerely,

Contract of Street, or

July 22, 2016

## Hon. ATTN:

Via Facsimile

Re: Aubrey

Dear Judge

Please be advised that Aubrey was placed on the SCRAM Systems Remote Breath monitoring program on July 20, 2016 and is currently undergoing random breath alcohol monitoring. Should our office receive any confirmed alerts you shall be notified immediately.

Should you have any questions, please do not hesitate to contact our office. We greatly appreciate being given the opportunity to assist in this matter.

Sincerely,

Section Section

services and increase cases from managing the second second

#### **iNewOrleans POS**

The iNewOrleans POS platform also consists of a backend API, web UI, administration UI, and native mobile application. This suite is designed to allow mobile and brick-and-mortar sales of Tickets. The tickets can be for City Sightseeing buses, tours, events, and more. The platform allows for discounts, promotions, wholesale (e.g., Expedia) purchase redemption, online ordering, and other specialized purchase scenarios. The mobile application works with the Infinite Peripherals Linea Pro and Infinea Tab devices, four different models of Bluetooth receipt printers, and Bluetooth barcode scanners.

The UI is highly customizable and can be quickly and easily adapted based on the client's needs. To date, this PA-DSS and PCI Compliant platform has processed over 68,000 orders totaling more than \$4.5 million in sales. The application is fully native, tested, and built with Objective-C.

## LSU Mobile

While at LSU, I directed and managed the development of LSU Mobile. Blackboard created the base application while I developed modules to be injected into the application for additional functionality. Additionally, the APIs and systems powering the application were custom developed to communicate with LSU's IBM Mainframe and related data systems. The custom modules were created with Objective-C and integrated the campus mapping solution, ArcGIS, into LSU Mobile (iOS).

## **Tiger Tracker**

The Tiger Tracker platform consists of a backend API, web UI, administration UI, and native mobile application. The platform is design to track and authorize attendance for events and resources at LSU. The mobile application works with the Infinite Peripherals Linea Pro and Infinea Tab devices.

## Countdown 2: Event Timer

This countdown event timer was developed using Objective-C. The application is available in the App Store and allows users to see the remaining time until their event as years, weeks, days, hours, minutes, and seconds. When the countdown has reached their target date and time, a Local Notification is displayed on the user's device and the application has a confetti animation for the expired timer.
